

Specification breakthrough for smartroof®

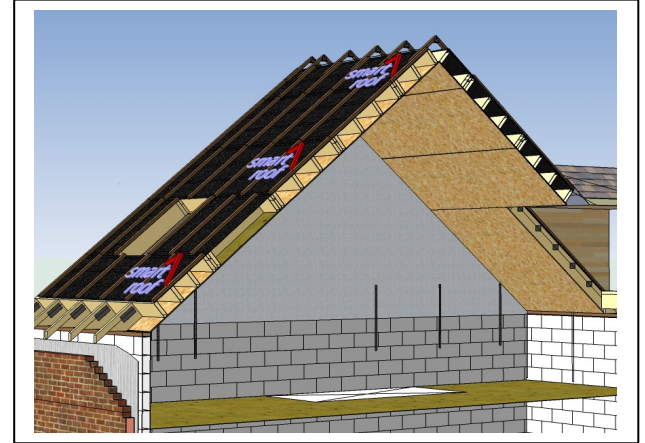

rethinking roof construction

Since launch in 2004, smartroof® has been adopted increasingly by major house builders across the UK. Having experienced the immediate benefits of the system they are keen to further explore what smartroof® has to offer.

Barratt Homes alone have installed over 1000 smartroofs to date, with the majority of designs having been converted from existing 'traditional' designs between our design teams. The specification of smartroof® is great recognition of the system's **inherent advantages** over traditional methods of roof construction.

smartroof's unique gable to gable spanning panels eliminate the **health and safety** risks associated with steel beams or purlins. In addition to this, the all-encompassing package replaces blockwork gables with prefabricated 'spandrel panels'.

smartroof® has proved to be **cost neutral** when compared to traditional methods of roof construction, and excels in reducing **construction time**. Designed primarily for room-in-the-roof construction, smartroof creates a **100% usable space** and more flexibility than any comparable panelised roof system.
