

'Fabric First' solution for ZERO CARBON

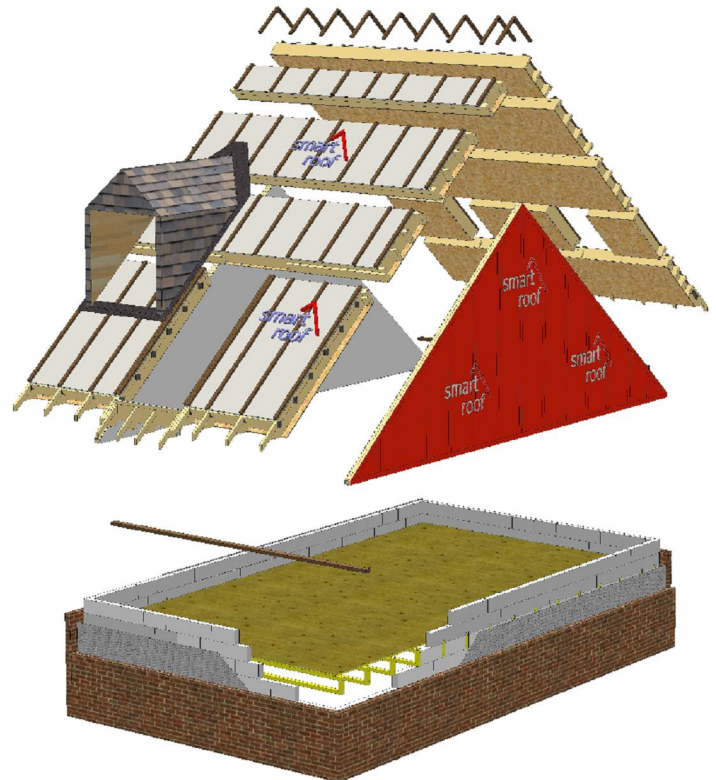

rethinking roof construction

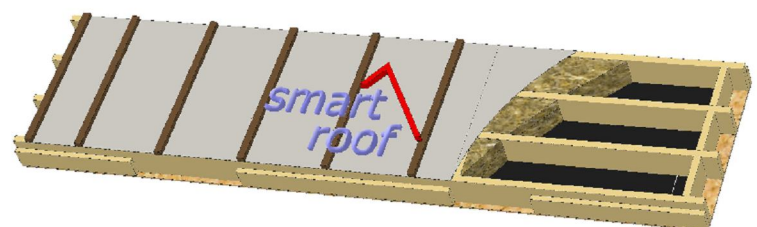

smartroof® is ready and prepared for zero carbon homes – the ever increasing focus on 'fabric first' identifies modern methods of construction as a key element to achieving zero carbon homes from 2016. smartroof® exhibited at the Zero Carbon Hub Seminar in February 2011, which highlighted the industries enthusiasm for innovative solutions.

smartroof® has recently launched it's new details in compliance with the Building Regulations Part L 2010. smartroof's pre-insulated panels are available in a range of constructions to meet ever increasing thermal requirements and it's interlocking connections mean that it is inherently airtight.

Panelised roof systems are fast becoming the accepted and expected method for warm roof construction, offering more than just a faster and safer way to build.

Panel constructions available from standard 0.2 U-value down to 0.09 U-value
