

smartroof® makes a show

rethinking roof construction

smartroof's speed of construction is consistently used to it's full advantage in the build plans of development show homes.

Traditional room-in-roof constructions – attic trusses or top-hats and purlins – typically take 3 weeks to erect, insulate and make water tight, where smartroof accomplishes all this in just 1 day!

Such reduced build times allow the show homes and marketing suite to open and begin attracting sales to the development.

With greater flexibility for roof light and dormer positioning, and the opportunity to create a greater living space by raising ceilings and pushing out eaves walls, smartroof acts a an excellent marketing tool.
