

smartroof® – the true 'room-in-room'

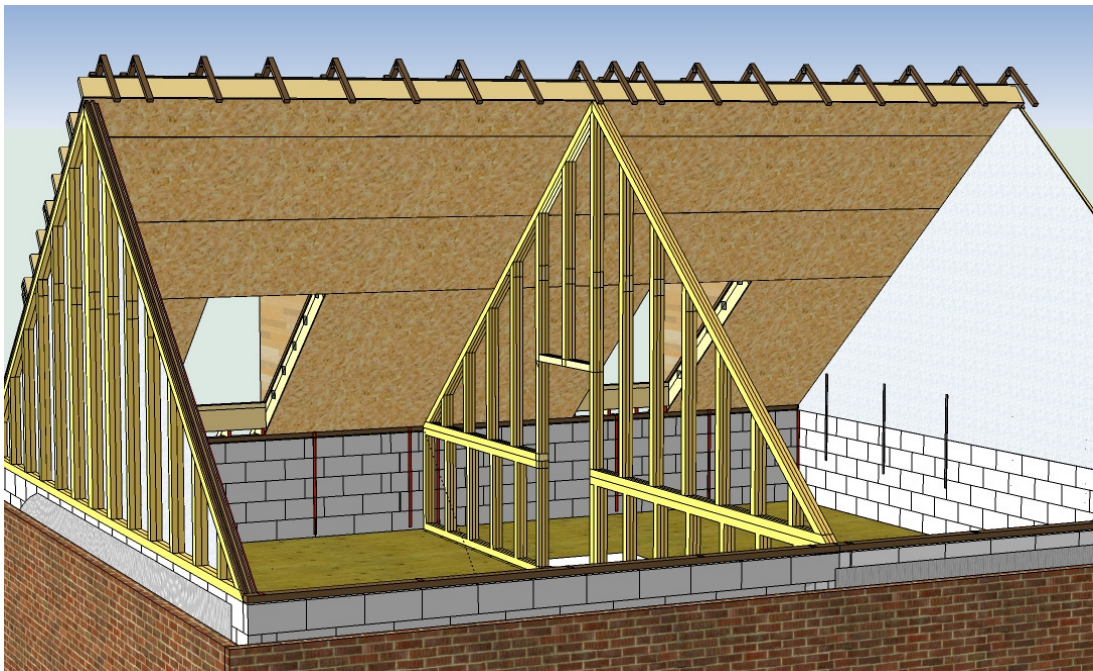

rethinking roof construction

smartroof® panels span gable-to-gable supported by prefabricated spandrel panels. This unique design eliminates purlins and ridge beams and frees the internal profile from all intrusions.

Unlike attic trusses and other purlins based panel systems, smartroof® does not restrict the ceiling height or overall extent of the room size. Ceilings may be lifted or removed all together to create a vaulted ceiling, and stud walls may be moved further into the eaves.

smartroof's design creates a 100% usable space and greater flexibility for roof light and dormer positioning. All in all, this provides greater opportunity for enhanced living comfort.
